

NEW CAN BUS SOLUTION

CAN BUS interface is provided (low traffic configuration, J1939 custom messages available): bit rate up to customer needs, protocol customized on customer requests.

In "logic box version" temperature setpoint, FAN setpoint and mode, pushbuttons state are checked via CAN BUS, and relative state of operation is transmitted back to customer HMI.

CAN BUS interface allows to drive CAN BUS equipped compressors, blowers, water valves, TFT panels etc.

Mixed solutions (part of the input/outputs) are also allowed and fully customizable.

Full parametrization/diagnostic Windows PC based tools/flash bootloader via CAN BUS is also available.
